

GObp in module 1.2.3.1.

Term

regulation of TORC1 signaling
late endosome to vacuole transport
miRNA metabolic process
regulation of osteoblast proliferation
regulation of autophagosome assembly
modulation by virus of host process
protein K63-linked ubiquitination
positive regulation of TOR signaling
interstrand cross-link repair

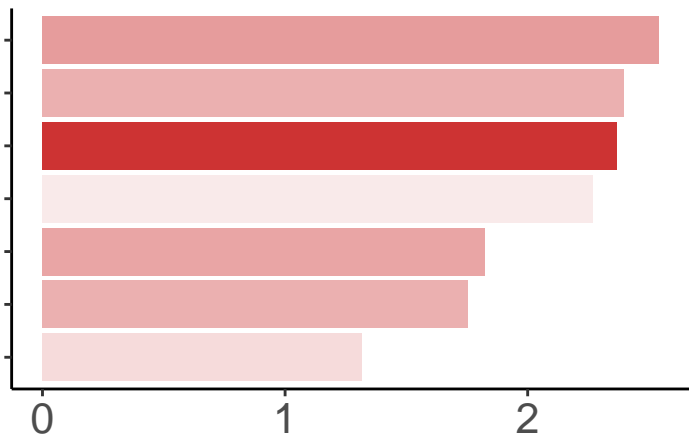

log2Enrichment

GOcc in module 1.2.3.1.

Term

endoribonuclease activity, producing 5'-phosphomonoesters
Rab guanyl-nucleotide exchange factor activity
histone acetyltransferase activity
protein phosphatase 1 binding
double-stranded RNA binding
protein kinase inhibitor activity
protein phosphatase regulator activity

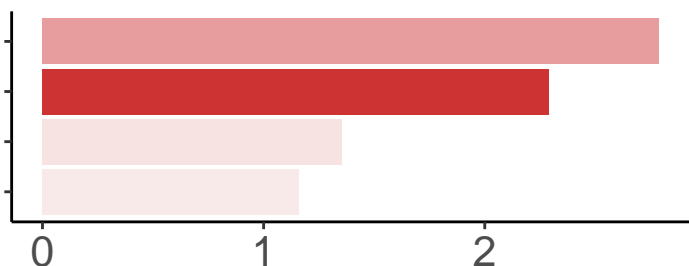

log2Enrichment

GOfm in module 1.2.3.1.

Term

retromer complex
protein serine/threonine phosphatase complex
autophagosome
midbody

log2Enrichment
